

Farhan Kurnia Ragil Syahputra

itsfarhankurnia@gmail.com | linkedin.com/in/farhan-kurnia | github.com/FarhanKurnia

SUMMARY

Backend-focused Software Engineer with experience in Golang and Laravel/Lumen, specializing in building scalable APIs and backend systems. Experienced in designing event-driven data pipelines using Kafka to synchronize data across distributed database systems. Strong foundation in database optimization, system reliability, and production-level troubleshooting, supported by 6 years of experience in network and technical support at an ISP. Proven ability to deliver real-world applications, including secure data masking tools and payment-integrated systems. Eager to contribute to global teams in building reliable and scalable backend services.

EDUCATION

Universitas Teknologi Digital Indonesia

2019 – 2023

Bachelor of Computer Science, Faculty of Information Technology (GPA: 3.85/4.00)

SMK Sakti Gemolong

2014 – 2017

Computer and Network Engineering (TKJ), Focused on networking fundamentals

WORK EXPERIENCES

BADAN SISTEM INFORMASI UNIVERSITAS ISLAM INDONESIA

October 2023 – Present

Backend Developer (Full Time)

- Managed multiple interconnected backend services within a centralized gateway architecture, enabling efficient service-to-service communication and data integration across domains.
- Designed and developed scalable backend systems using Golang and Laravel/Lumen, emphasizing clean architecture, maintainability, and long-term system reliability.
- Implemented event-driven data synchronization using Kafka to stream data across distributed database clusters (e.g., Academic and Financial domains), ensuring data consistency while reducing tight coupling between systems.
- Designed and maintained RESTful APIs to standardize inter-service communication and support seamless frontend integration.
- Optimized database performance by refactoring inefficient queries into a single joined query, reducing response time from ~60 seconds to ~3 seconds.
- Migrated a critical cron service from Python to Golang, leveraging goroutines to improve execution performance and simplify concurrency handling.
- Collaborated with cross-functional teams to deliver features reliably and ensure smooth system integration.
- Conducted code reviews to improve code quality, enforce best practices, and maintain consistency across backend services.
- Troubleshooting and resolving production issues, ensuring system stability and improving overall service reliability.

HABBIE AROMATIC

July – September 2023

Web Developer (Freelance)

- Led end-to-end development of a full-stack e-commerce platform using Laravel, focusing on backend systems for product management, order processing, and transaction handling.
- Collaborated directly with the client to gather requirements, define project scope, and align technical solutions with business needs.
- Planned and managed project timeline and deliverables, ensuring on-time delivery using a structured SDLC approach.
- Integrated Midtrans payment gateway to support secure, automated payments and real-time transaction updates.
- Implemented admin features to manage products, orders, and transactions, improving business operation efficiency.
- Built and deployed a live production e-commerce website used for real customer transactions (habbie.co.id).

CITRANET (PT Jembatan Citra Nusantara)

August 2017 – September 2023

IT Helpdesk Officer (Full Time)

- Provided technical support in a high-availability ISP environment, troubleshooting network and service issues affecting end users.
- Performed root cause analysis on connectivity and system-related issues, applying structured debugging approaches to identify and resolve problems efficiently.
- Collaborated with network and engineering teams to handle complex incidents, reducing downtime and improving overall service reliability.
- Managed and monitored incident tickets to ensure timely resolution and adherence to service-level targets.
- Built a strong foundation in system reliability, networking, and real-world production issue handling, which supports current backend engineering work.
- Handled high-volume support requests across multiple communication channels (chat, email, phone) in a fast-paced environment.

INTERNSHIP EXPERIENCE

CITRANET (PT Jembatan Citra Nusantara)

March – May 2022

Full-stack Web Developer Intern (University Internship)

- Developed a monolithic web-based data center guestbook application using Laravel to manage visitor records and access tracking.
- Designed and implemented database schema and backend logic to support application workflows and data processing.
- Built end-to-end features using Laravel MVC architecture, including routing, controllers, views, and server-side rendering.
- Implemented core functionalities such as data input validation, authentication, and CRUD operations.
- Followed a structured Software Development Life Cycle (SDLC) using the Waterfall model, including requirement analysis, system design (UML), development, and testing.
- Demonstrated strong time management by completing development work alongside full-time responsibilities.
- Project Link: <https://github.com/FarhanKurnia/DC-Visitor>

PT. TELKOM AKSES

July – October 2016

Technical Support Fiber Optic Intern (Vocational High School Internship)

- Performed on-site troubleshooting to diagnose and resolve fiber optic network connectivity issues.
- Conducted fault detection and distance analysis using OTDR, identifying cable damage points accurately.
- Executed fiber optic splicing to restore network connections and ensure signal stability.
- Assisted in fiber cable installation and deployment, including routing cables between ODP nodes and connecting to ONT endpoints.
- Developed a solid understanding of fiber network infrastructure (OLT, ODC, ODP, ONT) and end-to-end connectivity flow.

PROJECTS

Habbie Aromatic Ecommerce (Freelance Project)

July – September 2023

Full Stack Developer

- Developed a full-stack e-commerce web application from scratch using Laravel and Tailwind CSS for a real client.
- Designed and implemented admin panel features for product management, order handling, and content updates.
- Integrated Midtrans payment gateway to enable secure transactions with automatic payment status updates.
- Built core e-commerce functionalities including product catalog, cart system, and checkout flow.
- Applied a structured SDLC (Waterfall) approach from requirement gathering to deployment.
- Project Link: <https://habbie.co.id/>

Masking Tool Apps (Research Project)

March 2026

Full Stack Developer

- Developed a full-stack data masking application using Golang and React.js to solve real-world issues of incomplete and unsafe production data in staging environments.
- Designed configurable masking rules to anonymize sensitive data while preserving structure for realistic testing scenarios.
- Built a stateless backend service with secure database access, preventing direct exposure to production data.
- Implemented RESTful APIs for masking operations and seamless integration between frontend and backend.
- Improved development workflow by enabling teams to use realistic yet safe datasets for testing and debugging.
- Project Link:
 - Backend: <https://github.com/FarhanKurnia/masking-tool-backend>
 - Frontend: <https://github.com/FarhanKurnia/masking-tool-frontend>

Customer Care Officer Application (University Thesis Project)

September 2022 – February 2023

Backend Developer

- Built RESTful APIs using Lumen to handle customer service workflows, improving data handling efficiency and enabling real-time interaction via Pusher.
- Designed and implemented database schema using PostgreSQL, ensuring efficient data structure and relationships.
- Built JWT-based authentication for secure and stateless user access.
- Integrated real-time communication using Pusher for event-driven updates.
- Followed a structured SDLC (Waterfall) process, including requirement gathering, UML design, development, and testing.
- Project Link: <https://github.com/FarhanKurnia/REST-API-CCO-LUMEN>

ADDITIONAL PROJECTS

Destination Review Application (University Course Project)

March 2022

Backend Developer

- Developed a RESTful API service using Lumen to support a destination review and recommendation system.
- Designed and implemented database schema (MySQL) to manage user reviews, ratings, and destination data.
- Built authentication system using token-based approach for secure API access.
- Implemented core API features including CRUD operations for reviews and recommendation data.

- Ensured smooth integration by providing structured endpoints for frontend consumption.
- Project Link: <https://github.com/FarhanKurnia/REST-API-PWA-Lumen>

Split Bill Apps (Personal Project)

March 2025

Front-end Developer

- Developed a bill-splitting web application using React.js, Tailwind CSS, and DaisyUI to simplify expense sharing during group activities.
- Designed intuitive logic to calculate individual shares, including support for tax and discount distribution.
- Built a responsive and user-friendly interface, ensuring usability across desktop and mobile devices.
- Implemented features such as real-time calculation and bill summary export/download.
- Strengthened frontend development skills through hands-on exploration of component-based architecture and state management in React.
- Project Link: <https://github.com/FarhanKurnia/split-bill-react>

Islamic Prayer Collection Application (University Course Project)

March – June 2022

Flutter Developer

- Developed a mobile application using Flutter to provide a collection of Islamic prayers with user authentication.
- Implemented Firebase Authentication and Firestore for user management and data storage.
- Integrated external APIs using HTTP requests to fetch and display prayer-related content.
- Built core features including login functionality and content browsing interface.
- Project Link: <https://github.com/FarhanKurnia/FrameworkWebP6>

Note Apps - Juara Android Season 1 (Google Developers Group)

April 2022

Android Developer

- Completed Juara Android Season 1 program by Google Developers Group, focusing on Android development with Kotlin.
- Developed a note-taking mobile application using Kotlin, implementing core CRUD functionalities.
- Applied Android fundamentals including UI layout, navigation, and activity lifecycle management.
- Implemented local data persistence using Room database for storing and managing notes. Project Link: <https://github.com/FarhanKurnia/NoteAppJuaraAndroid>

Wordpress Freelancer

September 2021 - November 2022

Wordpress Web Developer

- Developed and customized WordPress-based websites for multiple clients with short development timelines.
- Handled end-to-end website setup, including theme customization, content configuration, and deployment.
- Collaborated with clients to gather requirements and deliver solutions aligned with their needs.

ADDITIONAL INFORMATION

TECHNICAL SKILLS

- Languages : Golang, PHP, JavaScript
- Frameworks & Libraries : Gin, Fiber, Laravel, Lumen, React.js
- Databases : MySQL, PostgreSQL
- Tools & Technologies : Docker, Git, JWT, Kafka (Event Streaming), WebSocket, Midtrans, Pusher
- Concepts : Microservices, RESTful API Design, Database Design, Data Security

OTHER SKILLS

- Basic Networking & Server Management (Linux-based environments)
- Web Application Deployment & Maintenance
- WordPress Development (Freelance projects)

ADDITIONAL SKILLS

- Experience working in collaborative and cross-functional teams
- Strong problem-solving skills with focus on debugging and system troubleshooting
- Familiar with asynchronous communication and independent work environments
- Able to write clear and structured technical documentation
- Fast learner with strong curiosity in backend systems and new technologies

LANGUAGES

- Indonesian (Native)
- English (Professional Working Proficiency)
